

What's **New** in **CaseLink**

Expect unlimited options. Expect flexible solutions. Expect the best.

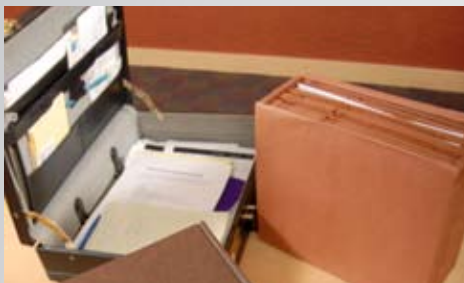

As the leader in the industry, BMS brings you first-to-market innovation with enhanced functionality to manage, organize and conduct your bankruptcy requirements. Our new and enhanced features provide the flexibility to meet your business challenges.

Organize Your Time and Data with Outlook Integration

CaseLink is the first software in the industry to provide seamless integration with Microsoft Outlook®. Outlook integration enables you to better organize your information and manage your daily priorities, while automatically synchronizing information between CaseLink and Outlook.

CaseLink enables you to set preferences in Outlook to synchronize items in Dates, Tasks, Calendar, Professionals, and QuikDocs. Outlook integration supports a variety of user preferences, including settings for pop-up reminders, dates, and e-mail attachments.

Simplify Your Files with Our Consolidated 341(a) Worksheet

Through advanced ECF technology, CaseLink captures and retrieves all information from Schedules A-J, Statement of Financial Affairs, and the Means Test and merges them into a single Microsoft Word or Word Perfect document. In addition, CaseLink consolidates Schedules A-D for viewing in a single grid. CaseLink enables you to succinctly conduct your 341(a) meetings by easily obtaining key data in one concise document.

Manage Your Assets with Flexible Accounts Receivable Options

Our multi-functional Accounts Receivable (A/R) interface allows you to add new accounts, link with multiple assets, create vouchers and calculate amortization to properly track and respond to A/R payments.

Other features include a payoff calculator, the ability to schedule interest payments, and enhanced ledger payment support such as splits, as well as multiple and partial payments. CaseLink also provides enhanced security measures to ensure that your data remains confidential and secure.
