

What's **New** in **TrustWorks**

Efficient ... Convenient ... Streamlined.

TrustWorks contains enhancements and features to increase productivity and streamline your bankruptcy processes.

Simplified Claim Maintenance

TrustWorks makes it easier to find and maintain specific claims by enabling you to create filters based on claim payment type, such as "Pay to Claimant," "Pay to Reserve" and "Do Not Pay," or by current status or priority, such as "Secured" claims. In addition, TrustWorks allows you to change claim payment status by groups of claims.

New Claim Alerts

To help manage the process of reviewing claims, TrustWorks allows you to automatically flag newly imported claims as "Review Necessary" to remove any guesswork of which claims may require further attention. All newly imported claims flagged for review will also display a status of "Pending" on the BMS Web Portal until the claim is validated and each "Review Necessary" designation is removed.

Enhanced Banking Functionality

New time-saving enhancements in banking include the ability to create checks by reproducing payee information from a previous check. This eliminates the need to repeatedly look up claim information or mailing address. This enhancement is useful for creating new checks from stopped or voided checks, or for checks you may generate on a monthly basis to repetitive payees. Another time-saving enhancement is the ability to reverse a deposit with one click, such as with instances of NSF checks.

Convenient Time-Savers on the Home Page

The Home Page will include new one-click links to instantly communicate via e-mail to BMS or the bank. Other links are available to request copies of bank statements or print overnight airbills for banking deposits.
